## Rotating Kerrison

*Alex Ebner  
CEO, Wiggins Medical*

Rotating Kerrison's are incredibly useful tools for surgeons, allowing them to precisely cut into the exact position they need. With rotation possible in 45° increments, Rotating Kerrison's can yield a vast range of bite variations impossible with traditional Kerrison's. An added benefit is that Rotating Kerrison's generally have an internal spring which gives them even more jaw travel than non-rotatable models — all together providing the user with more control and precision available for their surgical procedures.

Rotating Kerrison's instruments are the popular choice among modern surgeons due to their effectiveness in precision surgery. These specialized devices are designed with convenience and dexterity in mind, providing surgeons with the ability to move their cutting edge while still having maximum control of the instrument. This is ideal when performing endoscopic procedures in tight areas where space is shared by both a camera and a surgeon, as they can cut or carve precisely without compromising visibility of the surgical field. Rotating Kerrisons are also available in various lengths and styles to suit any given medical procedure, offering surgeons unparalleled flexibility and reliability throughout their operations.

With the ability to interchange cutting shafts and fully disassemble them for cleaning, these instruments make precision maintenance much easier. Not only do users benefit from improved upkeep overall, but this additional bonus makes them a valuable find among medical equipment. However, special care must be taken when reprocessing as the spring and firing pin should never be lost or misplaced. With the proper guidance and expertise, these instruments provide an excellent platform for long-term use in any job setting.

*Beyond Clean Kerrison Rongeur Expert™ Biography:*

# Alex Ebner

## CEO Wiggins Medical

Two decades of Medical Device experience in Sales, Marketing, Quality, Regulatory, Management, Product development and design. Alex founded ACE Medical Company in 2011 as a regional distribution company focused on better instruments for surgery. In 2015, ACE began manufacturing our first surgical instruments, a Kerrison Rongeur in our South German factory. Now, they manufacture in 8 different Surgical Instrument factories throughout Europe and the United States with global distribution in 27 countries. In 2017 Alex acquired Wiggins Medical, a leading Kerrison Rongeur manufacturer with customers in all 50 states and a reputation for quality innovative instruments. Alex travels often to Germany to meet with manufacturers and hand select the instruments they manufacture.

Stay tuned to his Kerrison Rongeur Expert Series so you can learn more about how industry conversations and best practices are impacting this unique surgical instrument!
