## **Multi-Tray Sterilization: Advantages for Staff**

*Kelly Truppo, Product Marketing Directory | Turbett Surgical*

Once you transition to a multi-tray sterilization system, healthcare staff will love no longer having to lift and hold heavy trays while blue wrap or multiple filters are inspected.

They will appreciate freedom from the risk of injuries caused by the repetitive motion of individually wrapping and lifting trays.

They also will enjoy not being blamed for holes that typically develop in as many as 10 percent of trays that are sealed with blue wrap.

A multi-tray instrument sterilization system streamlines workflow and simplifies the tray identification process, meaning less stress and fewer delays. There also will be less overtime required. Overall, you can count on better staff morale.

The use of multi-tray containers enables your staff to focus on core responsibilities rather than menial tasks. That allows them to end a full workday with energy to spare.

Sterile processing personnel can load instrument trays inside of a multi-tray sterilization container within a matter of minutes, creating more time to focus on the critical aspect of inspection. Properly sterilized sets will make it to the operating room on time, far more often.

Today's hospital rooms and ambulatory care centers deserve an alternative to the decades-old method of blue wrap — one capable of handling today's high procedure volumes while maintaining clinical standards for patient safety.

By simplifying manual procedures, reducing physical labor, and speeding operating room set-up, you can reduce the strain on staff while increasing the number of surgeries completed each day or finish the day earlier.

Your OR and SPD staff will experience a better quality of life, which in turn will improve employee retention. That's something that every hospital and ambulatory care center is seeking in this challenging era for healthcare systems.
