Beyond Clean Multi-Tray Sterilization Expert™:

What is Multi-Tray Sterilization?

Kelly Truppo, Product Marketing Directory | Turbett Surgical

Whether you work in a hospital or an ambulatory surgical center, you know the power of having clean instruments when you need them and the stress that ensues when they aren't there.

Multi-tray sterilization is a smart way to sterilize more efficiently, with less wear on staff. A multi-tray system even creates the potential for increased case volume. In the current times with staff retention being so crucial, those advantages are vital.

With this system, instrument trays are inspected as normal, lids are removed from trays, and they are placed inside one large metal container. You will install locking tags and sterilization filters, then guide the container into your existing sterilizer to be processed. There are varying sizes depending on the desired number of trays to be sterilized at once. After processing, containers can be wheeled directly into the operating room for use.

It's easier to keep pace with today's growing surgical volume and maintain clinical standards for patient safety when trays don't have to be wrapped and sterilized individually, using a decades-old process.

There's a better way to work that improves workflow using your existing tray inventory.

It also helps eliminate lifting by nurses, surgical technicians, and sterile processors.

The system even lets you reduce foot traffic and unnecessary air flow in the OR since it can be opened by one person in minutes.

Since multi-tray sterilization is far less labor intensive, more time can be dedicated to inspection. Instrument turnover time will be reduced by technology that is both cost-effective and user-friendly.

By simplifying manual procedures, reducing physical labor, and speeding set-up, this system reduces strain on staff while increasing the number of surgeries that can be completed each day. The result: better bottom lines, satisfied surgeons, and improved quality of life for OR nurses and SPD staff.
